SMRATI SENGAR

Senior Software Engineer | Laravel | Node.js | React.js | REST APIs

+91 9650484586 | smrati.official@gmail.com | LinkedIn | Github

ABOUT

Full Stack Developer with 7+ years of experience in designing, developing, and maintaining scalable web applications using PHP, Laravel, Node.js, React.js, and SQL databases. Experienced in building RESTful APIs, developing responsive user interfaces, integrating third-party services and payment gateways, and deploying applications on AWS. Skilled in database optimization, authentication, real-time communication, and CI/CD workflows. Adept at collaborating with cross-functional teams, understanding business requirements, and delivering reliable, high-quality software solutions using Agile methodologies. Committed to writing maintainable code, solving complex technical challenges, and developing applications that support business growth.

WORK EXPERIENCE

Senior Software Engineer | Nead IT Solutions Pvt. Ltd. - Noida (January 2024 to Present)

- Handled HRMS platform processing more than 1,000 employee records across payroll, attendance, leave, and lifecycle modules with multi-step rule execution and approval hierarchies.
- Designed more than 25 REST APIs supporting authentication, role-based access, and payroll computation flows using Laravel Passport and Spatie.
- Reduced database query latency by 30 percent through indexing strategy, query restructuring, and caching of frequently accessed HR records.
- Managed workflows processing attendance rules, shift calculations, and payroll cycles involving multi-stage validations across organizational roles.
- Standardized reusable backend modules reducing duplicate service logic across multiple HR modules by approximately 35 percent.
- Managed more than 15 complex operational workflows involving attendance policies, shift scheduling, leave validation, payroll execution, and compliance-driven business rules across production-scale HR operations supporting multi-role organizational processes.
- Coordinated with cross-functional teams across bi-weekly sprint cycles, code reviews, and release deployments, contributing to stable feature delivery timelines and scalable platform maintenance with Agile Methodology.
- Leveraged Docker-based development and deployment workflows to maintain environment consistency, reducing deployment-related configuration issues and streamlining engineering operations across the application lifecycle.

Software Engineer | e2logy technology Pvt. Ltd. - Noida (September 2023 to December 2023)

- **Formulated** backend booking system managing more than 500 property listings and processing more than 1,000 transaction events through Stripe-integrated payment workflows.
- Implemented more than 20 REST APIs handling property search, filtering, booking validation, and payment confirmation, reducing booking failures by approximately 20 percent through structured validation logic.

Software Engineer | Agicent Technology Pvt. Ltd. - Noida (September 2021 to August 2023)

- Delivered backend services across more than 6 production applications spanning food delivery, social networking, recruitment, parking, pharmacy, and real estate domains.

- Refactored API structures and database queries, reducing backend response time by 30 percent and improving API throughput under concurrent user loads.

Web Developer Intern | Aoelogic Technology- Noida | (September 2020 to August 2021)

- Spearheaded the development of automated rule-based workflows, enhancing real-time verification and challan generation for more than 1,200 critical regulatory records.
- Balanced backend integration, authentication workflows, and frontend functionality improvements while gaining practical exposure to scalable application development and operational process automation.

.NET Developer | Keshav Mangalam Impex Pvt. Ltd. - Noida | (July 2019 to August 2020)

- Worked on compliance system processing more than 500 corporate registration and verification records for regulatory validation workflows under Singapore ACRA.
- Enforced validation workflows for GST allocation, compliance assessment, and offense evaluation across more than 500 registration and verification records, maintaining secure data processing standards and operational accuracy within a regulated environment.

PROFESSIONAL PROJECTS

HRMS (Human Resources Management System) (January 2024 to August 2025)
Tech Stack: Laravel, Node.js, ReactJS, MySQL, Docker, Passport, Spatie

- Directed backend delivery for a HRMS platform managing payroll, attendance, leave processing, and employee lifecycle workflows for more than 1,000 employee records, enabling structured automation across enterprise HR operations.
- Implemented more than 25 RESTful services using Laravel Passport and Spatie RBAC, supporting OAuth2 authentication, role-based access control, and multi-level approval workflows.
- Devised rule-driven backend workflows for shift calculation, attendance verification, payroll processing, and reimbursement handling within production HR systems.
- Refined database interaction patterns and backend execution flow, achieving 30 percent lower response latency via query optimization, indexing strategy enhancements, and caching layer implementation.

Orion House (August 2023 to December 2023)
Tech Stack: PHP, MySQL

- Constructed a comprehensive real estate platform, enabling seamless property discovery, rental, and purchase workflows for diverse property types, facilitating more than 500 secure transactions.

Essel (April 2023 to August 2023)
Tech Stack: PHP

- Delivered a recruitment platform for construction workers supporting more than 1,000 candidate interactions across job discovery and employer connectivity workflows.
- Built notification and profile tracking automation flows, reducing manual intervention by 25 percent while improving application processing throughput across recruitment operations.

Swap A Spot (April 2023 to August 2023)
Tech Stack: Laravel, Stripe, Socket.io

- Built real-time parking reservation system using Socket.io supporting more than 500 users with concurrent booking and live owner interaction workflows.
- Integrated Stripe payment processing and improved transaction reliability by approximately 20 percent through event-driven backend event handling.

BeachGrub (September 2021 to August 2023)

Tech Stack: Laravel, MySQL

- Orchestrated CRM backend services managing restaurant, valet, and customer workflows across more than 1,000 operational records and daily transactions.
- Streamlined backend processing and API coordination, reducing manual administrative effort and improving operational efficiency by 30 percent.

Patriot Nation (January 2022 to December 2022)

Tech Stack: ReactJS, Node.js, SQL

- Contributed to a social networking platform handling feed generation, media processing, and user engagement workflows across more than 5,000 interactions.
- Improved API responsiveness and reduced frontend data latency by approximately 25 percent through optimized backend communication patterns.

EDUCATION

- Raj Kumar Goel Institute of Technology and Management | Bachelor of Technology in Computer Science and Engineering | 2015 to 2019
- Gyan Deep Sr. Sec. Public School - Class 12 | (2014) | 72%
- Gyan Deep Sr. Sec. Public School - Class 10 | (2012) | CGPA: 9.0

SKILLS

- **Programming Languages:** PHP, JavaScript, SQL, C
- **Backend Technologies:** Laravel, Node.js, Express.js, RESTful APIs, JWT/OAuth Authentication
- **Frontend Technologies:** ReactJS, HTML, CSS, JavaScript
- **Database Management:** MySQL, SQLYog
- **System & Architecture:** System Design, Backend Architecture, Workflow Orchestration, Microservices, Authentication & Authorization, Access Control, Service Integration, Event-Driven Processing, Enterprise Application Development
- **DevOps & Development Tools:** Docker, AWS, Git, GitHub, Postman
- **Development Methodologies:** Agile, Scrum
